After 15 years of integrating mobile equipment for manufacturers, our industrial experience naturally led us to design and produce tools adapted to all stages of production.

From design to management and production control, we have developed digital collaboration tools, and the name of the brand : CO WORKER seemed obvious.

Olivier LOUIS - CEO

A FRENCH BRAND

Coworker© was created from the collaboration between two companies: MSi (Micro Star International) and Yatoo. MSi is one of the three largest manufacturers of computer products in the world, specialised in high-end products and renown for the reliability of its components. Yatoo is a specialist in mobility since 2001 and has developed its know-how in assembly, engineering and maintenance of rugged tablets in the French and European market.

The quality of MSi's products combined with Yatoo's knowledge of the rugged tablet market led to the idea that an even better response to customers' needs was possible. The challenge was to find a balance between the durability of the products, the reliability of the components (to limit failure rates), without compromising on performance and functionality and within a budget adapted to the market's needs. The Coworker© brand was created.

Since then, we have been offering products from the world's best manufacturing lines, in compliance with the specifications drawn up: concerning performance, stability of components and durability of products. The final assembly of the products as well as the maintenance are assured in France.

Coworker© is a French brand whose mission is to provide the professional market with an adapted answer to the specific needs concerning the equipment and its industrial use.

The philosophy of Coworker© is to ensure that the tools chosen represent the best balance between performance, durability and the investment made.

Launched in 2018, the first range of Coworker© products is composed of rugged tablets.

6 INCHES
CW-6

The CW-6 is a mix between a phone and a tablet, the so-called **“fablette”**, which available under Android 11 OS. Its **IP65** and **MIL-STD 810G** standards make it an exceptional rugged tool, giving it the solidity and ressistance required by complex environments. Various modules such as an RFID reader, barcode reader or even a fingerprint scanner can be added to this tablet. The new CW-6 offers high performance for professionals.

Initially designed for warehouse management, this equipment is suitable, thanks to its 1000 nits, for the use of field technicians, drivers/deliverers, or for CMMS/CAPM software.
